

CLIENT USES ASK DATAIQ TO

Cut Analysis Time by 93% with Conversational Intelligence

“Ask DataIQ provides answers much quicker. I can determine the scope of impacted claims almost instantly, giving us clearer detail and far less manual work.”

— Data Manager

OVERVIEW

Quadax partnered with a multi-location specialty practice client as an early beta user of Ask Data IQ, our new conversational intelligence solution powered by Snowflake. Ask Data IQ enables instant, natural-language access to claims, remits, and Xpeditor data—helping teams get answers in seconds without dashboards, reports, or manual investigation.

THE CHALLENGE

Too Many Tools.

Too Much Manual Work.

Too Much Time.

Before Ask DataIQ, the client relied on Power BI to answer everyday operational questions like open claims, payer errors, unmatched remits and claim level detail relationships.

Even simple questions required hours of manual report building, dataset merging, and navigating between multiple systems.

**Ask Real Operational Questions
and Receive Immediate,
Actionable Answers.**

“Show me the number of claims worked in the last 30 days.”

“What were the top 10 custom converts last month?”

“What detail-level field was corrected the most last month?”

THE SOLUTION

With Ask DataIQ, the organization gained:

- Instant, conversational access to claims, remits, and Xpeditor insight
- Faster, easier reporting with no dashboards or queries required
- The ability to merge claim-level details that were difficult to combine in Power BI
- A fast way to determine the scope of impacted claims

THE RESULTS

93%

Reduction in Analysis Time

A report that previously required 4 hours was completed in 15 minutes using Ask DataIQ.

Improved Data Clarity

Ask DataIQ made it easy to combine claim details that were more difficult to reconcile in Power BI.

Faster Operational Decisions

The client could quickly understand the scope of issues and impacted claim groups—significantly reducing manual investigation time.

Broad Efficiency Gains

Client saw improvements across **every** key metric area, including:

- Time required to find answers
- Reduction in manual data digging
- Fewer ad-hoc reporting requests
- Reduced dependence on SMEs
- Faster access to operational insight

Ask DataIQ

Instant Answers. Smarter Decisions. Zero Complexity.
